PROJECT NAME	Automated Car Catalog System For Enhanced Showroom Management

A Data Flow Diagram (DFD) for an Automated Car Catalog System within ServiceNow would visually

represent the flow of information as customers browse, select, and request cars, and how that data interacts with the showroom management system. This diagram would depict external entities like customers and the system itself, along with processes like browsing the catalog, selecting vehicles, managing inventory, and handling requests. Data stores, such as the car catalog and customer information, would also be included.

Uses:

Requesting services or products.

automate and manage service requests, streamlining the delivery process and improving efficiency.

to make sure that services that need a high level of care get it every time.
